

Concerning BPL, I have considerable concern as to its' impact on low band VHF television, HF aeronautical communications, HF shipboard communications, reception of WWV, and the impact on Open Air Test Sites as well as amateur radio and low band VHF commercial users. From videos I have seen/heard from the ARRL, appropriate testing on Open Air Test Sites may well be impossible. I would strongly recommend the commission reconsider its' position.

Sincerely,

James R. Hampton
